Введение

Арки второго порядка служат усилителями действия арки первого порядка и совместно они способствуют быстрейшему достижению цели, т.е. реализации функции бога или чара. Арки второго порядка получаются из арок первого порядка, которые заполняют всю окружность, а не заполненный остаток в окружности и есть арка второго порядка. Арка второго порядка всегда меньше арки первого порядка и эффективность её действия зависит от присутствия в сутках или годе одновременно двух арок первого порядка расположенных симметрично справа и слева от арки второго порядка. Но первое время, необходимо исполнить все вехи арок первого порядка в данном периоде. А потом уже можно исполнять только четыре вехи трёх арок, пространство само достроит неисполненные вехи.

В таблицах приведены вехи арок первого порядка, в которых необходимо осуществлять или требы, или какие либо другие одинаковые действия, которые закручивают час, сутки, шестидницу, месяц или год и способствуют прорастанию в четвёртое измерение нашего физического тела, обеспечивая тем, самым безграничное расширение диапазонов нашего видения. Потому что из четвёртого измерения, видны все миры третьего измерения, находящиеся в данной точке пространства.

Если в окружности нарисовать арку с любым углом, то остальная часть окружности, называется таланом, откуда происходит слово талант.

$$360^\circ - \text{угол арки} = \text{талан}$$

Талан делится на равные части (вежды), закручивающие данный цикл и создающие конус в четвёртое измерение (поскольку природа стремится к упорядочению и вытесняет из себя неравный веждам объект), что как раз и способствует прорастанию нашего физического тела в четвёртое измерение. Явление прорастания тела в четвёртое измерение легко обнаруживается человеком, поскольку резко возрастают диапазоны видения.

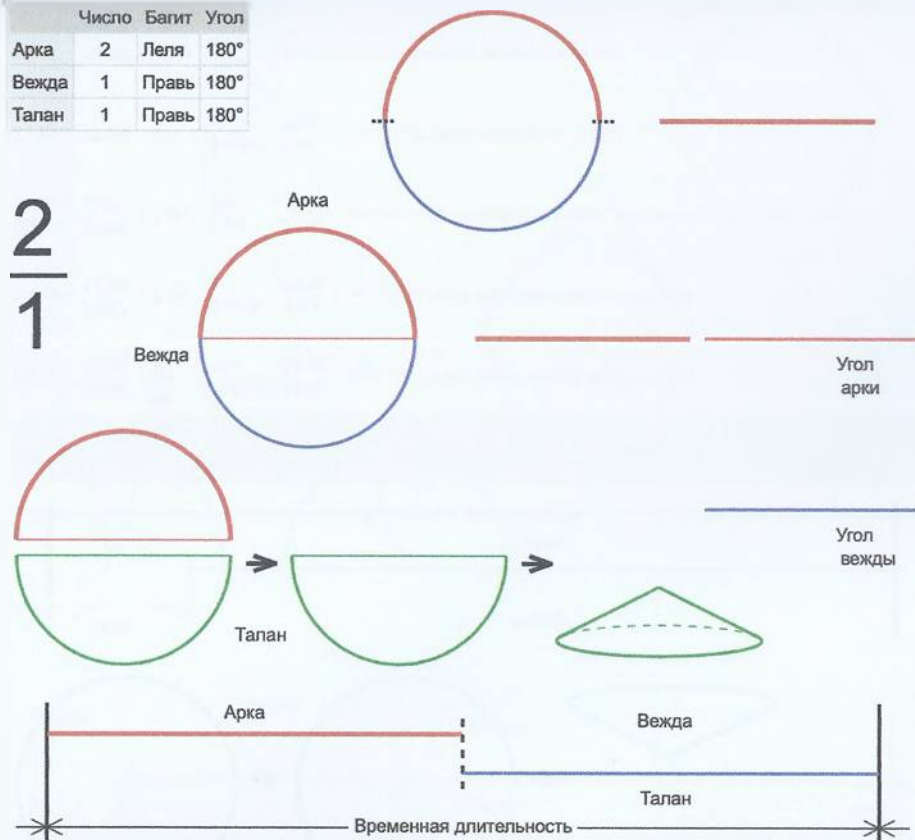

Арка

При совмещении сторон Арки возникает конус
